RECOMMENDED CITATION

Mohammed looti (2025). *DANCING MOUSE*. Encyclopedia of psychology. Retrieved from <https://encyclopedia.arabpsychology.com/?p=13984>

a group of mice demonstrating behavior similar to dancing. They possess a genetic fault wherein deterioration of hair cells occurs in the inner ear, generating loss of audile abilities and handicapped operations of the vestibular system of the ear, thereby eliciting the dancing.

DANCING MOUSE: "A dancing mouse will often run forward to backward in circles while standing in one place."
